

Forsus Appliance

- As with any orthodontic appliance, some discomfort or irritation may occur. This should not last more than a week. Take Tylenol or Advil as needed. Please call the office at (973)701-2200 if discomfort continues beyond several days.
- The spring may irritate your lip and cheek. Use wax as needed until your mouth adjusts.
- When the lower jaw is brought forward it may feel like your teeth do not fit. This feeling will go away in a few days.
- Occasionally a spring may come loose or a wire may break. Please call us if this happens.
- If a rod disengages from the spring, compress the spring and reinsert the rod to put it back together.
- If you have trouble re-engaging the spring or have breakage, you may secure it with elastics or dental floss.
- Always be careful about what you eat. Avoid hard and sticky foods and be sure to cut your foods into smaller pieces.
- If breakage occurs, call the office for advice on what needs to be done.
